CONCLUSION

Bullying Victimization as a Disability in Public Elementary and Secondary Education

Douglas E. Abrams*

I. INTRODUCTION

A. Jamey Rodemeyer (1997-2011)

“JAMIE IS STUPID, GAY, FAT AND UGLY. HE MUST DIE!”

“I wouldn’t care if you died. No one would. So just do it :) It would make everyone WAY more happier!”

“Kill your self!!! You have nothing left!”

“you’re a bad person, you don’t belong here, jump off a bridge or something!”

“Go kill yourself, you’re worthless, ugly and dont have a point to live.”

“You weren’t born this way. You shouldn’t have ever been born.”

“Jamie” was Jamey Rodemeyer, a 14-year-old freshman who was starting his second week at Williamsville North High School in Williamsville, New York, in the fall of 2011. For several months, classmates targeting him as gay sent messages such as these in social media, the climax of bullying

that reportedly began in the fifth grade and continued throughout middle school.\(^8\)

As Jamey entered Williamsville North, his life was torn between outward signs of emotional strength and inner impulses toward personal despair. In May of 2011, he used his webcam to produce and post online his video for the “It Gets Better Project,” which seeks to fortify students who are bullied because of perceptions about their sexual orientation.\(^9\) The project’s perspective is that the sting of childhood and adolescent bullying fades with the passage of time. “All you have to do is hold your head up and you’ll go far,” Jamey spoke directly into the camera, “Just love yourself and you’re set . . . . It gets better.”\(^{10}\) The video, his intermittent positive blog postings, and his denials of personal troubles reportedly reassured his parents that he was taking the incessant bullying in stride.\(^{11}\)

Advising schoolchildren to wait patiently until life “gets better” may seem sensible to many adults, and may indeed help many children overcome frustration or setback caused by bullying or other crises in their lives. The advice has its limits, however, because impatience can color an adolescent’s worldview. Recollecting a difficult childhood decades later is one thing; awaiting a better adulthood may be quite another.

Unlike adults, who have learned to anticipate the future and thus to manage delay, children have a built-in time sense based on the urgency of their instinctual and emotional needs . . . .

. . . A child will experience a given time period not according to its actual duration, measured objectively by calendar and clock, but

---

according to his purely subjective feelings of impatience and frustration.  

Jamey Rodemeyer’s outward expressions of optimism masked suicidal thoughts that began as early as the fifth grade and later led him to begin seeing a social worker and a therapist. Early in 2011, he responded to a social media question, “What’s one thing people don’t know about you?” “How much I hate my life,” he typed, “Maybe it’s cause I’m bullied. a lot.” “People would just keep sending me hate, telling me that gay people go to hell,” he explained on YouTube.

On September 8, 2011, Jamey wrote that “[n]o one in my school cares about preventing suicide, while you’re the ones calling me [slur not quoted in the media] and tearing me down.” On September 9, he wrote that “I always say how bullied I am, but no one listens. What do I have to do so people will listen to me?” Perhaps anticipating four more years of actual and virtual bullying in high school, Jamey posted his final online message in the early morning hours a few days later and then committed suicide in his backyard.

B. The Emerging National Consensus About School Bullying

As of January 2013, forty-nine states (all but Montana) have enacted anti-bullying statutes, thirty-six of which explicitly address cyberbullying, the “electronic aggression” that Jamey Rodemeyer endured in the last months of his life. The state statutes typically require school districts to adopt

14. Tan, Teen Suicide, supra note 3.
17. Id.
18. Id.
written anti-bullying policies, teach prevention curricula, discipline bullies, and cooperate with law enforcement when bullying turns criminal. By acting in such unison, state legislatures have articulated a national consensus that bullying in the public elementary and secondary schools inhibits learning by substantially disrupting or interfering with the educational mission and by compromising victims’ physical or emotional security.

22. See, e.g., 105 ILL. COMP. STAT. 5/27-23.7(a) (Supp. 2012) (“The General Assembly finds that a safe and civil school environment is necessary for students to learn and achieve and that bullying causes physical, psychological, and emotional harm to students and interferes with students’ ability to learn and participate in school activities.”); IOWA CODE § 280.28 (West 2011) (“The general assembly finds that a safe and civil school environment is necessary for students to learn and achieve at high academic levels. Harassing and bullying behavior can seriously disrupt the ability of school employees to maintain a safe and civil environment, and the ability of students to learn and succeed.”); NEB. REV. STAT. § 79-2,137(1) (West, Westlaw through 102nd Leg. Second Reg. Sess. (2012)) (“The Legislature finds and declares that ... [b]ullying disrupts a school’s ability to educate students; and ... [b]ullying threatens public safety by creating an atmosphere in which such behavior can escalate into violence.”); N.J. STAT. ANN. § 18A:37-13 (West, Westlaw through L.2012) (“The Legislature finds and declares that: a safe and civil environment in school is necessary for students to learn and achieve high academic standards; [and] harassment, intimidation or bullying, like other disruptive or violent behaviors, is conduct that disrupts both a student’s ability to learn and a school’s ability to educate its students in a safe environment.”); N.Y. EDUC. LAW § 10 (McKinney, Westlaw through L.2012) (“The legislature finds that students’ ability to learn and to meet high academic standards, and a school’s ability to educate its students, are compromised by incidents of discrimination or harassment including bullying, taunting or intimidation.”); OKLA. STAT. tit. 70, § 24-100.3 (West, Westlaw through the Second Reg. Sess.) (“The Legislature finds that bullying has a negative effect on the social environment of schools, creates a climate of fear among students, inhibits their ability to learn, and leads to other antisocial behavior.”); OR. REV. STAT. ANN. § 339.353(1)(b) (West, Westlaw though 2012 Reg. Sess.) (“Harassment, intimidation or bullying and cyberbullying, like other disruptive or violent behavior, are conduct that disrupts a student’s ability to learn and a school’s ability to educate its students in a safe environment.”); TENN. CODE ANN. § 49-6-1014 (West, Westlaw through 2012 Second Reg. Sess.) (“Harassment, intimidation, bullying or cyber-bullying, like other disruptive or violent behavior, is conduct that disrupts a student’s ability to learn and a school’s ability to educate its students in a safe environment.”); W. VA. CODE ANN. § 18-2C-1 (West, Westlaw through the 2012 First Extraordinary Sess.) (“The Legislature finds that a safe and civil environment in school is necessary for students to learn and achieve high academic standards. The Legislature finds that harassment, intimidation or bullying, like other disruptive or violent behavior, is conduct that disrupts
Several states also require school administrators to notify law enforcement authorities about students in school who commit criminal acts characteristic of much bullying (such as assault, harassment, stalking, or sexual or racial intimidation). At the federal level, agencies have recommended creative anti-bullying strategies and Congress has authorized grants to states and localities for bullying-prevention curricula.

Educators, social science researchers, legislators, and other concerned citizens continue debating the likely effectiveness of particular states’ anti-bullying statutes, which the lawmakers periodically amend in light of experience and emerging studies. Legislation and periodic amendments remain only tentative first steps, however, because, as former Harvard Law School Dean Roscoe Pound wrote, “[t]he life of the law is in its enforcement.”

Pound’s dictum means that achieving a statute’s protective purpose depends not on mere enactment, but on responsible efforts by public authorities to implement the statute. Words on paper protect no one, and statutes do not enforce themselves.

Implementing statutory mandates often comes with costs and risks that might give public authorities pause as they contemplate enforcement measures.

ures. Designing anti-bullying policies, teaching bullying-prevention curricula, and monitoring disputes among students strain tight local school district budgets by consuming precious time of faculty members and administrators;\textsuperscript{27} disciplinary sanctions may expose these school authorities to litigation by disciplined bullies and also their parents.\textsuperscript{28}

Mindful of these costs and risks, the core of my presentation today is that face-to-face bullying and cyberbullying should be perceived as acts that saddle victims with a disability that inhibits learning. This perception may strengthen the resolve of school authorities to counter bullying, and may also provide a readily understood rationale to help schools win essential support and cooperation from students, parents and other local constituencies for bullying prevention programs.

Perceiving bullying victimization as an educational disability puts school authorities on familiar terrain because they have grown accustomed to enforcing the Individuals with Disabilities Education Act (IDEA), which Congress enacted in 1975 as the Education for All Handicapped Children Act.\textsuperscript{29} For more than a generation, the IDEA has sought to guarantee “full educational opportunity to all children with disabilities,”\textsuperscript{30} and the emerging state legislation seeks to guarantee this opportunity to children who are bullied.\textsuperscript{31} The IDEA reaches both congenital disabilities\textsuperscript{32} and disabilities that, like bullying victimization, stem from events or circumstances unrelated to biology or birth.\textsuperscript{33}

Without amending the IDEA or other disability laws to recite bullying, two reasons support analogies between bullying victimization and disabilities. First, Part II of this Article describes how face-to-face bullying and cyberbullying impose on victims the sort of educational deprivation that the IDEA addresses. Second, Part III describes how today’s belated public sensitivity

\textsuperscript{27} See, e.g., Abrams, supra note 21, at 414-16; Jan Hoffman, Online Bullies Pull Schools into the Fray, N.Y. TIMES (June 27, 2010), http://www.nytimes.com/2010/06/28/style/28bully.html?page\_wanted=all&\_r=0 (seventh-grade guidance counselor reported that she can spend up to three-quarters of her time mediating student disputes that began with insults transmitted electronically; these disputes also distract the school’s principal from other pedagogical responsibilities).

\textsuperscript{28} See, e.g., Douglas E. Abrams, Recognizing the Public Schools’ Authority to Discipline Students’ Off-Campus Cyberbullying of Classmates, 36 NEW ENG. J. ON CRIM. & CIV. CONFINEMENT 181, 187-88 (2011) [hereinafter Abrams, Recognizing the Public School’s Authority].

\textsuperscript{30} 20 U.S.C. § 1412(a)(2).
\textsuperscript{31} See supra note 22 and accompanying text.
\textsuperscript{32} 20 U.S.C. § 1401(3) (defining “child with a disability”).
\textsuperscript{33} See, e.g., Cedar Rapids Cmty. Sch. Dist. v. Garret F., 526 U.S. 66 (1999) (determining rights under the IDEA of high school student who was paralyzed from the neck down in a motorcycle accident when he was four years old).
to school bullying victims resembles the belated public sensitivity to students with disabilities that led to passage of the IDEA in 1975. Public awareness of the plight of schoolchildren with disabilities was long overdue by the early 1970s, and public awareness to the plight of bullied schoolchildren is long overdue today. In light of the IDEA and recent state anti-bullying legislation in virtually all states, it is no longer acceptable public policy to perpetuate insensitivity in either sphere.

Teachers and school administrators familiar with the IDEA have grown accustomed to perceiving a disabled student’s fragile physical or emotional condition as a barrier to learning. Bullying can leave student victims similarly fragile, and perceptions matter in public education as much as in other areas of everyday life.

II. BULLYING VICTIMIZATION AS AN EDUCATIONAL DISABILITY

A. A “Major Public Health Problem”

1. The Scope of the Problem

Leading national experts have graced this Missouri Law Review Symposium with thoughtful insights concerning constitutional, psychological and practical issues raised by efforts to confront cyberbullying’s effects on schoolchildren whose classmates tag them as “different.” This tagging may arise not only from perceptions of the target’s sexual orientation, but also from such factors as the target’s race, ethnicity, social isolation, physical or emotional weakness or disability, obesity, small size, appearance, or lack of social skills. Researchers have even linked bullying to a target’s speech or

35. See, e.g., Ian Janssen et al., Associations Between Overweight and Obesity with Bullying Behaviors in School-Aged Children, 113 PEDIATRICS 1187, 1187 (2004) (discussing the link between obesity and childhood bullying); Kirsti Kumpulainen et al., Bullying and Psychiatric Symptoms Among Elementary School-Age Children, 22 CHILD ABUSE & NEGLECT 705, 712 (1998) (discussing bully-victims with psychological disturbances or who exhibit certain social skills); J.P. Piek et al., The Relationship Between Bullying and Self-Worth in Children with Movement Coordination Problems, 75 BRIT. J. EDUC. PSYCHOL. 453, 454 (2005) (discussing children with physical disabilities and lack of social skills as being bullied by peers); Young Shin Kim et al., School Bullying and Youth Violence: Causes or Consequences of Psychopathologic Behavior?, 63 ARCHIVE GEN. PSYCHIATRY 1035, 1039-40 (2006) (noting that children who experience social isolation are likely to be bullied).
language impairment, vision problems, cancer, cerebral palsy, diabetes, or muscular dystrophy.36

Bullying occurs when a student or group of students repeatedly cause intentional physical or emotional harm to another student in a relationship marked by an imbalance in physical or emotional power.37 The harm may come from physical assault, words, ostracism, teasing, or some combination. Repetition and power imbalance distinguish bullying from isolated disagreements between students, or even from isolated acts of violence or intimidation.38

Bullies have prowled schools for a long time.39 Fans of old movies might recall Tom Brown’s School Days, which starred Sir Cedric Hardwicke and Freddy Bartholomew in 1940. The movie was based on an 1857 novel about a British public school, and bullying was the main theme.40

Even more virulent today is cyberbullying—messages that “repeatedly target victims with threats, ‘rumors,’ gossip, or insults” through such electronic media as “email, instant messaging, blogs, cell phones, social networking sites, and even websites featuring the victim.”41 Cyberbullying barely existed fifteen years ago, but this Symposium’s keynote speaker, Dean Palfrey is right that “[b]y virtually all accounts, bullying of young people by their peers online is on the rise.”42 Some researchers suggest that cyberbullying is so prevalent today that many students now casually dismiss it as “an
expectation of high school,” indeed almost as a rite of passage for students unfortunate enough to be targeted by their classmates. Other researchers predict that cyberbullying incidents will likely multiply as technology’s influence on children’s daily lives continues to grow.

The estimates tell a grim story. “[A] nationally representative survey conducted by the National Institute of Child Health and Human Development (NICHD) [found that] approximately 30% of . . . schoolchildren in grades six through ten have been bullied[,] or have bullied other children ‘sometimes[,]’ or more often[,] within a semester.” Cyberbullying victimizes between 20% and 25% of middle school and high school students, though some polls report even higher percentages. In a 2011 study, 76% of 14- to 24-year-olds said that digital abuse is a serious problem for people their age.

These imposing percentages, and the physical and emotional injury that they portend for increasing numbers of young victims, have led the U.S. Department of Education to call actual and virtual school bullying “an urgent social, health, and education concern.” The Centers for Disease Control and

TIMES (Mar. 1, 2012), http://www.nytimes.com/2012/03/01/opinion/kristof-born-to-not-get-bullied.html (“Bullying and teenage cruelty are human rights abuses that need to be higher on our agenda.”).

2012] BULLYING VICTIMIZATION AS A DISABILITY 789
Prevention has identified school bullying as a “major public health problem,” an assessment echoed by the American Medical Association, the National Institutes of Health, and the World Health Organization.

2. The Public Schools’ Role

Major public health problems that threaten children’s well-being call for a coordinated response from the “pediatric safety system.” The system begins at home with parents, who remain primarily responsible for protecting, disciplining, and teaching values to their children. The Supreme Court has recognized that “the custody, care and nurture of the child reside first in the parents, whose primary function and freedom include preparation for obligations the state can neither supply nor hinder.”

Responsibility for children’s well-being, however, does not necessarily end with the parents. When parents falter or seek assistance from public authorities for protection that parents cannot provide by themselves, the pediatric safety system may extend to public elementary and secondary schools, law enforcement, the juvenile and criminal courts, the state child protective agency, and perhaps in extreme cases, the state mental health agency. This Article focuses on public schools, which are the central, and potentially the

53. Id.
55. Abrams, supra note 21, at 400.
most effective, public entities in the pediatric safety system’s protective response to bullying by elementary and secondary students.

The public schools’ central role in responding effectively to student bullying derives from the essential character of public education itself. Public schools, for example, enroll most of the nation’s school-age children, who interact throughout the academic year with teachers and administrators who are charged (in the Supreme Court’s words) with “maintaining discipline, health, and safety” and “protect[ing] pupils from mistreatment by other children.” Not only that, but most bullies know their victims largely or entirely from school, and bullies normally foresee reaction only from other classmates because they know that hardly any of the Internet’s two billion other users worldwide would have reason to pay attention.

The essential character of public education is enshrined in the law. States guarantee children a free public education, and compulsory education statutes and the juvenile court’s truancy and neglect jurisdiction compel attendance by children who do not attend private schools or receive home schooling. Justice Alito is right that “[m]ost parents, realistically, have no choice but to send their children to a public school.”

59. Id. at 348 (stating that students “spend the school hours in close association with each other, both in the classroom and during recreation periods.”); Jaana Juvonen & Elisheva F. Gross, Extending the School Grounds? – Bullying Experiences in Cyberspace, 78 J. SCH. HEALTH 496, 497 (2008) (“[W]hen most schoolmates have Internet access at home, electronic communication is conducted largely within school-based peer networks.”).

60. See, e.g., Doninger v. Niehoff, 527 F.3d 41, 50 (2d Cir. 2008) (upholding a disciplinary sanction imposed on a high school student for a blog posting that concerned events at school, and encouraging her classmates to read and provide responses); J.S. ex rel. H.S. v. Bethlehem Area Sch. Dist., 807 A.2d 847, 865 (Pa. 2002) (upholding discipline imposed by a middle school because “the web site was aimed not at a random audience, but at the specific audience of students and others connected with this particular School District”); Internet Usage Statistics, INTERNET WORLD STATS, http://www.internetworldstats.com/stats.htm (last updated Jan. 17, 2013) (2,405,518,376 Internet users worldwide on June 30, 2012).

B. The Disability of School Bullying Victimization

I have written before about why the public schools’ first response to face-to-face bullying and cyberbullying should be effective prevention curricula, including curricula that enlist parents, students, school personnel, and other local constituencies in a cooperative effort to create a school culture grounded in civility, mutual respect, and freedom from physical or emotional violence.\(^63\) Prevention curricula, carefully conceived and effectively taught, have been shown to reduce the volume of cyberbullying in elementary and secondary schools.\(^64\)

Much bullying, however, evades even the most effective prevention curricula\(^65\) and creates barriers to educational opportunity similar in effect to barriers created by physical or emotional disabilities recognized by the IDEA. Bullying studies and commentary continue, but pediatric professionals have achieved consensus on a fundamental proposition that should cause parents, teachers and school administrators no surprise – bullied children cannot learn effectively when they are dogged by physical or emotional distress, public humiliation, and anxiety about personal safety. “[F]reedom from fear of bullying is not enough to ensure successful learning,” summarizes one researcher, “but it is a necessary condition for effective learning.”\(^66\) “Without a safe and secure environment, a school is unable to fulfill its basic purpose of providing an education.”\(^67\)

Pediatric professionals recognize bullying as a form of child abuse, normally perpetrated by other children rather than by adults.\(^68\) Researchers have found that bullied students may display psychosomatic symptoms re-
BULLYING VICTIMIZATION AS A DISABILITY

Sustained face-to-face bullying may leave bruises or other physical manifestations, but a cyberbullying victim’s plight may be even more severe because “once anything gets online you can’t get rid of it.” Internet postings can deprive victims of safe sanctuary in their homes, and may leave them feeling “tethered to their tormenters.” “If someone is picking on you in the school yard, you can go home,” said the mother of a 13-year-old Virginia boy who committed suicide with a shotgun after cyberbullies taunted him about his small size and dared him to kill himself for more than a month. “When it’s on the computer at home, you have nowhere to go.”

Virulence may escalate – as it did in Jamey Rodemeyer’s case – because electronic transmission does not expose the victim’s body language and tone of voice to the cyberbully. Cyberbullies may not even recognize the potential destructiveness of their messages because of “moral disengagement,” the concept that “[t]he further removed we are from the consequences of our actions, the easier it is to emotionally separate ourselves from our own behavior.” In lay terms, one high school sophomore explained that “it’s so much easier to be mean online” because the bullies “don’t see your reaction.”

Jamey Rodemeyer’s suicide was not the typical response to bullying, but his response was also not unique. Researcher Dan Olweus found that bullying “victims’ devaluation of themselves sometimes becomes so overwhelm-

These kids can be accessed around the clock through technology. There’s really no escape.”).
80. See, e.g., Abrams, supra note 21, at 402 (discussing prior suicides); Abrams, Recognizing the Public Schools’ Authority, supra note 28, at 181-82; Michael Ollove, Bullying and Teen Suicide: How Do We Adjust School Climate?, CHRISTIAN SCI. MONITOR (Apr. 28, 2010), http://www.csmonitor.com/USA/Society/2010/0428 /Bullying-and-teen-suicide-How-do-we-adjust-school-climate.
ing that they see suicide as the only possible solution.\textsuperscript{81} Other bullying victims may harbor suicidal thoughts that diminish emotional well-being, even when these thoughts do not ripen into suicide attempts.\textsuperscript{82}

Because depression and suicide ideation appear common among nine- to thirteen-year-olds victimized by bullying,\textsuperscript{83} “bullycide”\textsuperscript{84} and “cyberbullycide”\textsuperscript{85} have become almost terms of art in educational circles following a rash of suicides in recent years. Researchers do not know the precise number of bullying victims who are driven to contemplate or attempt suicide, but what researchers do know reinforces studies that find “compelling reasons to associate at least some of the child and adolescent risk for suicidal thoughts and actions to school bullying.”\textsuperscript{86} Half of the nation’s forty-nine million elementary and secondary students suffer face-to-face or cyberbullying at some time before leaving high school; a victim may endure bullying for weeks, months or even years (as Jamey Rodemeyer did);\textsuperscript{87} and suicide is the third

CLINICAL CHILD & ADOLESCENT PSYCHOL. 59, 60 (2002) (noting that “10% of American third- through sixth-grade children have reported experiencing frequent victimization from peers,” and “the child who has been labeled as victimized at one point in time, tends to preserve that label years later”); Susan P. Limber, Bullying Among Children and Youth, JUV. JUST. BULL. (Office of Juvenile Justice & Delinquency Prevention), Apr. 1998, available at http://www.ojjdp.gov/jjbulletin /9804 /bullying2.html (finding that 77% of survey participants indicated they were bullied during their school careers).
leading cause of death among American adolescents. As researchers intimate, the lines between bullying and childhood suicide likely cross with troubling frequency.

“Bullying is not the only risk factor for suicidal thoughts and behaviors, but it surely now must be added to the list.” Even if bullying is only one cause among others, the numbers are cause for discomfort. In a 2011 nationwide survey by the Centers for Disease Control and Prevention, 28.5% of high school students said that they felt so sad or hopeless every day for two consecutive weeks in the prior month that they stopped doing some usual activities. During the twelve months preceding the survey, 12.8% of students had planned how they would attempt suicide, 7.8% of students had actually attempted suicide one or more times, and 2.4% of students had made a suicide attempt that resulted in an injury, poisoning, or overdose that required treatment by a physician or nurse. These predictors may be underestimates because medical experts believe that many child and adolescent deaths reported as “accidental” are actually suicides.

In light of bullying’s severe emotional and physical manifestations, perceiving bullying victimization as an educational disability makes sound pedagogical sense and advances the child protective impulses that underlie the national consensus expressed by the state anti-bullying legislation. The perception also makes sense because, as Part III demonstrates, bullying victimization and educational disability each hold pedigrees marked by decades of official indifference to schoolchildren who faced barriers to equal educational opportunity.

III. THE HISTORICAL ROOTS OF STUDENT-DISABILITY AND ANTI-BULLYING LEGISLATION

Like general public recognition of the effects of physical or emotional disabilities on educational opportunity in public elementary and secondary schools, general public recognition of the effects of bullying on educational opportunity was a long time coming.

A. The Belated Public Recognition of Disabled Students’ Needs

For decades, states closed public schoolhouse doors to thousands of children whose physical or emotional disabilities led authorities to label them “ineducable.” In 1985, Justice Thurgood Marshall wrote that in public education and other areas of American life, children and adults with mental disabilities had been “subject to a ‘lengthy and tragic history’ of segregation and discrimination that can only be called grotesque.” He explained:

During much of the 19th century, mental retardation was viewed as neither curable nor dangerous and the retarded were largely left to their own devices. By the latter part of the century and during the first decades of the new one, however, social views of the retarded underwent a radical transformation. Fueled by the rising tide of Social Darwinism, the “science” of eugenics, and the extreme xenophobia of those years, leading medical authorities and others began to portray the “feeble-minded” as a “menace to society and civilization . . . responsible in a large degree for many, if not all, of our social problems.” A regime of state-mandated segregation and degradation soon emerged that in its virulence and bigotry rivaled, and indeed paralleled, the worst excesses of Jim Crow. Massive custodial institutions were built to warehouse the retarded for life; the aim was to halt reproduction of the retarded and “nearly extinguish their race.” Retarded children were categorically excluded from public schools, based on the false stereotype that all were ineducable and on the purported need to protect nonretarded children from them . . . .

The Supreme Court tacitly approved categorical exclusion when it reviewed Oregon’s compulsory education statute in its landmark Pierce v. So-

95. Id. at 461-63 (citations omitted); see also, e.g., Tennessee v. Lane, 541 U.S. 509, 534 (2004) (Souter, J., concurring) (discussing state statutes “indiscriminately . . . prohibiting certain individuals with disabilities from . . . attending public schools”).
ciety of Sisters decision in 1925.96 Without a hint of criticism or constitutional infirmity, the unanimous Court recited the statute’s exemption for “children who are not normal.”97 The Court dismissed the exemption as “not specially important here,” even though the decision determined the constitutionality of the state’s formula for delivering universal public education.98

Before and after Pierce, lower courts upheld state constitutional and statutory mandates that excluded many disabled students from a free public education. In 1919, for example, the Wisconsin Supreme Court rejected a challenge to a jury verdict that excluded “a crippled and defective child” whose “depressing and nauseating effect upon the teachers and school children . . . distract[ed] the attention of other pupils, and interfere[d] generally with the school’s discipline and progress.”99 The state supreme court held that “[t]he right of a child of school age to attend the public schools . . . cannot be insisted upon when its presence therein is harmful to the best interests of the school. This, like other individual rights, must be subordinated to the general welfare.”100

Education law had progressed little by 1958, when the Illinois Supreme Court interpreted the state constitutional provision that guaranteed “a thorough and efficient system of free schools, whereby all children of this state may receive a good common school education.” The court held that the provision had “no application” to “feeble minded or mentally deficient children who, because of limited intelligence, are unable to receive a good common school education.”101 The court reasoned that the “constitutional guarantee . . . cannot assure that all children are educable,” and that “the mentally deficient are objects of charity.”102

By 1970, more than half of the nation’s eight million children with disabilities were still “either totally excluded from schools or sitting idly in regular classrooms awaiting the time when they were old enough to ‘drop out.’”103 As late as 1974, the educational needs of 82% of the nation’s emotionally disturbed children went unmet.104 As lower courts appeared poised to recognize the states’ constitutional obligation to provide a free public education to children with physical or emotional disabilities,105 Congress responded in

1975 with the Education for All Handicapped Children Act (later renamed the IDEA). The Supreme Court has described the Act as an initiative to “reverse [a] history of neglect.”106 Every state has joined the Act’s federal-state partnership, which provides block grant funding in return for full implementation.107

The IDEA’s assurance of “full educational opportunity to all children with disabilities”108 has become “a hallmark of education policy in the United States.”109 Amid bitter political partisanship during years marked by Democratic and Republican ascendency alike, overwhelming bipartisan majorities in the United States Senate and House have embraced the landmark 1975 Act and its periodic reauthorization measures.110 Presidents from both parties have wholeheartedly embraced the Act111 and the child-protective mission

110. See, e.g., 143 CONG. REC. S4295-96 (1997) (statement of Sen. Jeffords) (“Democrats, Republicans, the House and Senate, worked together alongside the administration in crafting this consensus bill.”); Remarks on Signing the Individuals with Disabilities Education Improvement Act of 2004, 2004 PUB. PAPERS 3038-39 (Dec. 3, 2004) (recognizing that congressional members “from both sides of the political aisle . . . worked together to reauthorize” the IDEA); Statement on Congressional Passage of the “Individuals with Disabilities Education Improvement Act of 2004,” 2004 PUB. PAPERS 2992 (Nov. 20, 2004) (“This legislation shows that we can accomplish a great deal when we work together, and I commend the Congress for this bipartisan achievement.”); Remarks on Signing the Individuals with Disabilities Education Act Amendments of 1997, 1997 PUB. PAPERS 699 (June 4, 1997) (“this bill . . . received virtual unanimity of support across party lines and regional lines.”).

111. See, e.g., Statement on the 35th Anniversary of the Individuals with Disabilities Education Act, 2010 DAILY COMP. PRES. DOC. 01019 (Nov. 29, 2010) (“In America, we believe that every child, regardless of class, color, or creed, or ability deserves access to a world-class education.”); Proclamation No. 8426, 74 Fed. Reg. 51223 (Sept. 30, 2009) (discussing the IDEA, and noting that “we must insure that every American receives an education that prepares him or her for future success”); Statement on Congressional Passage of the “Individuals with Disabilities Education Improvement Act of 2004,” supra note 110 (“Like all students, children with disabilities have the best chance to pursue America’s great promise with a good education.”); Statement on Senate Passage of the Proposed “Individuals With Disabilities Educa-
that it advances. 112 As President Obama stated in 2010 on the IDEA’s thirty-fifth anniversary, today “[w]e remember that disability rights are civil rights too.” 113

Today “[f]ew voices in American discourse openly challenge the right of [disabled] children to attend public school, and those that do are confronted by vociferous objectors.” 114 To be sure, published decisions regularly resolve disagreements between parents and school districts about how best to redeem the IDEA’s promise of a free public education to a particular student with disabilities. 115 Despite the passions that these individual disagreements may arouse, however, I have never heard an educator argue that public education was better off with the pre-1970s approach, which left millions of dis-

112. The education of the nation’s students is often seen as an avenue to success for children. See, e.g., President Barack Obama, 2011 State of the Union Address (Jan. 25, 2011) (“[T]he question is whether all of us, as citizens and as parents, are willing to do what’s necessary to give every child a chance to succeed . . . . When child walks into a classroom, it should be a place of high expectations and high performance.”); President George W. Bush, Remarks on the No Child Left Behind Act at Kearny School in Philadelphia, Pennsylvania (Jan 8, 2009) (“It’s unacceptable to our country that vulnerable children slip through the cracks . . . . Every child can learn . . . . [E]very child has dignity and worth.”); President Bill Clinton, 2000 State of the Union Address (Jan. 27, 2000) (“Because education is more important than ever, more than ever the key to our children’s future, we must make sure all our children have that key.”); President Bill Clinton, 1993 State of the Union Address (Feb. 17, 1993) (“America must ask more of our students, our teachers, and our schools. And we must give them the resources they need to meet high standards.”).

abled children isolated, ignored, warehoused in school, or denied an education.\textsuperscript{116} The IDEA establishes that “the days of exclusion, segregation, and denial of educational opportunity [are] over in this country.”\textsuperscript{117}

\section*{B. The Belated Public Recognition of Bullied Students’ Needs}

Belated public policy recognition of the educational needs of schoolchildren with disabilities resembles the belated public policy recognition of the educational needs of schoolchildren who suffer face-to-face bullying, cyberbullying, or both.\textsuperscript{118} Until the past decade or so, tolerance of school bullying proved remarkably resistant to meaningful change in the United States.\textsuperscript{119} Death or serious injuries to a particular victim might provoke a school suspension, an arrest, or other temporary public response to media coverage, but sustained anti-bullying initiatives failed to gain traction with the public.

Researchers first paid serious attention to school bullying in Scandinavia in the early 1970s, and the pace of research into school bullying accelerated in 1982 when three Norwegian boys between the ages of ten and fourteen committed suicide, probably in reaction to persistent bullying.\textsuperscript{120} Most Americans, however, did not pay serious attention until after April 20, 1999, when two seniors turned bombs and semiautomatic weapons on classmates at Columbine High School in Littleton, Colorado.\textsuperscript{121} The commando-style raid left twelve classmates, a teacher, and the two killers dead, and two-dozen other victims wounded.\textsuperscript{122}

The two Columbine killers reportedly had been taunted in school for years, without intervention by school authorities or other links in the pediatric safety system.\textsuperscript{123} Parents and students told the Colorado governor’s Columbine Review Commission that “a significant amount of bullying had oc-

\bibitem{122} Id. at xxi.
\bibitem{123} See, e.g., Michael D. Shear & Jacqueline L. Salmon, \textit{An Education in Taunting; Schools Learning Dangers of Letting Bullies Go Unchecked}, WASH. POST, May 2, 1999, at C1.
\end{thebibliography}
curred” in the high school, but that “it would have been futile to report bull-
ying to the school administration because no one there would have done any-
thing about it.”124 The Commission called bullying a “risk factor” for school
violence and recommended that schools “adopt one or more of the bullying-
prevention programs that have already been tested and proven effective.”125

After the Columbine tragedy, the United States Secret Service and the
United States Department of Education studied Columbine and thirty-six
other incidents of targeted school violence involving forty-one attackers since
1974.126 In 2002, the agencies reported a common denominator: “Almost
three-quarters of the attackers felt persecuted, bullied, threatened, attacked or
injured . . . prior to the incident.”127 “In several cases, individual attackers
had experienced bullying and harassment that was long-standing and se-
vere.”128 Several attackers “described being bullied in terms that suggested
that these experiences approached torment.”129

Columbine transformed American public education by focusing un-
precedented attention on school violence, including bullying. Swift response
in state legislatures from coast to coast expresses an emerging public policy
consensus that the traditional tolerance of school bullying – the dismissive
“kids will be kids” attitude – no longer justifies turning a blind eye to victims’
distress. The nation’s values have evolved, and the public has greater know-
l edge and sensitivity about bullying’s potentially harmful short term and long
term effects, which Part II of this article describes.

The emerging consensus of the states soundly rejects the timeworn ex-
cuse that bullying is an inevitable and ultimately benign rite of passage that

THE SCHOOL SHOOTER: A THREAT ASSESSMENT PERSPECTIVE 22-23 (1999) (height-
ened risk of school violence exists when “[b]ullying is part of the school culture and
school authorities seem oblivious to it, seldom or never intervening or doing so only
selectively”).
adolescents outgrow after “toughing it out.” Similarly rejected is the occasional argument that bullying might even be a positive experience by helping to prepare victims, tagged by classmates as “different,” for the rough-and-tumble “real world.” Since Columbine, the nation has grown more sensitive to the dynamics of bullying and we now expect more from the pediatric safety system than what passed for student protection just a few decades ago.

IV. CONCLUSION

President Obama is right that “no child should be afraid to go to school in this country.” The recent proliferation of state legislation qualifies bullying as a matter of transcendent public concern and no longer as the largely personal predicament of individual victims and their families.

Analogies conjoining the IDEA and state anti-bullying legislation recognize that “schools are entrusted with a unique role in our society to mold children into responsible and wise adult citizens.” It is no longer acceptable public policy to revert to the pre-IDEA approach that overlooked the needs of disabled schoolchildren. The public understands more now about disabled children’s needs than was understood then, and the IDEA strives to place disabled children in the mainstream of American society. Similarly, it is no longer acceptable public policy to revert to the earlier approach that overlooked the needs of bullied schoolchildren. We understand more now about these children’s needs than we understood in the past, and the states’ near-universal embrace of anti-bullying legislation tips the scales in favor of protecting bullied children in school.

For decades, millions of schoolchildren like Jamey Rodemeyer have faced harsh choices – to stay home from school, or else to endure emotional or physical injury without meaningful protection from teachers, administrators, or other agents in the pediatric safety system. For students tagged as “different,” these choices imposed a disability that compromised educational opportunity, the core aspiration that should underlie state guarantees of a free public education in our nation whose educational policy strives to “leave no child behind.”
